## M.Sc., Physics Employability

| Course & Title     | ELECTIVE COURSE I / MICROPROCESSOR AND MICROCONTROLLER |                  |    |  |  |
|--------------------|--|------------------|----|--|--|
| Class              | I MSc Physics  | Semester         | II |  |  |
| Internal Marks -25 | External Marks-75                                      | Total Marks: 100 | 0  |  |  |

## **Course Objectives**

- To understand the basic concept of microprocessor.
- To understand techniques for faster execution of instructions and improve speed of operation and performance microprocessors.
- To learn the fundamental programming concept and methodologies.
- To understand the basic architecture of intel 8085 microprocessor.
- To practice the fundamental programming methodologies in c programming language.

- 2. https://www.vssut.ac.in/lecture\_notes/lecture1423813120.pdf

### **Course Outcome:**

CO1: Write programs to run on 8085 microprocessor.

CO2: Understand and device techniques for faster execution of instruction, improve speed of operations.

CO3: Understand microprocessor and its advantage.

CO4: Describe the fundamental components of a C program e.g source file, header file, main function , functions and libraries.

CO5: Explain and apply fundamental syntax rules for identifies , declarations, expressions, statements and functions.

### Mapping of COs with POs & PSOs:

| CO/PO | РО |   |   | PSO |   |   |   |   |   |   |

| Class   | I MSc Physics     | Semester                         | II     |
| Internal Marks -25  | External Marks-75 | Total Marks: 100                 |        |

#### **Course Objectives**

- Become familiar with layered communication architectures (OSI and TCP/IP).
- Understand the client/server model and key application layer protocols.
- Learn sockets programming and how to implement client/server programs.
- Understand the concepts of reliable data transfer and how TCP implements these concepts.
- Know the principles of congestion control and trade-offs in fairness and efficiency.

| Cognitive | K-1 Acquire/Remember  |                |

- 2. http://www.networkworld.com/blogs

#### **Course Outcome:**

CO 1: Understand importance of data communication systems and fundamentals.

CO 2: Distinguish and relate various physical Medias, interfacing standards and adapters.

CO 3: Explain various flow control techniques.

CO 4: Analyze short range and long range wireless technologies

CO 5: Analyze various modulation technique in analog and digital careery system

#### Web-Resources:

1. Fundamental of Numerical Methods and Data Analysis-G.Collins.pdf

### **Course Outcome:**

CO 1: To Equip them with sufficient Knowledge base of physics so that they do not find any difficulty pursuing higher Education

CO 2: Trained practical exposure which could equip to face the challenges in Physics.

CO 3: Understanding the Programming in C++ in constants and variables of the functions

CO 4: To Write C++ computer programming necessary for numerical integration to trapezoidal and simpson 's 1/3 rule

CO 5: Understand the various statements and Arrays.

#### **Course Outcome:**

CO 1: Recognize and explain the functional units of computers

CO 2: Describe assembly languages and machine instructions by analyzing how the data is stored and fetched from memory.

CO 3: Explain the execution of complete instruction and bus organizations.

CO 4: Identify various interrupt handling mechanism and buses.

CO 5: Differentiate between different types of memories.

#### **Course Outcome:**

CO 1: The students are expected to learn the art and science of carrying out experimental research.

CO 2: At the end of the course a student should be able to design and carry out an experiment on his/her own.

CO 3: This is an important skill which anybody wanting to do experimental research is expected to possess.

CO 4: To learn the art and science of carrying out experimental research

CO 5: Techniques of curve fitting and parameter estimation

## **Course Outcome:**

CO 1: Discuss the types of nanotechnology, molecular technology and the preparation of nano materials.

CO 2: Explains the fundamental of the devices such as logic devices, field effect devices, and spintronics.

CO 3: Describe the concepts of silicon MOSFET and Quantum Transport Devices.

CO 4: Summarize the types, synthesis, interconnects and applications of carbon nano tubes.

CO 5: Explain the concepts, functions, fabrications and applications of molecular electronics

### **Course Outcome:**

CO 1: Explain what it means to use Spectroscopic methods for qualitative and quantitative analysis.

CO 2: Compare and contrast of atomic and molecular spectra.

CO 3: Explain the difference between stokes and anti-stokes line in a Raman spectrum.

CO 4: Understanding of Quantum theory and NMR spectroscopy.

CO 5: The probability of transition between vibration levels of two electronic states determined by Frank-Condon principle.

### **Course Outcome:**

CO 1: Students will learn about the fundamentals of

CO 2: Nucleation mechanism and different kinds of nucleation.

CO 3: To learn about important crystal growth technique like Bridgeman, czochralski (pulling method), solution growth and hydrothermal methods, physical and chemical vapor transport.

CO 4: To understand with various techniques involved in crystal growth.

CO 5: To determine various theoretical parameters.

#### **Course Outcome:**

CO 1: Understand the principle and structure of optical fibers.

CO 2: Understand the working principle of fiber optical sources and couplers and apply it in the optical communication systems.

CO 3: Apply the fundamental principles of optics and light wave to design optical fiber communication systems.

CO 4: Understand different analog and digital transmission systems.

CO 5: Understand and apply the concepts of coherent optical modulation and detection techniques.
